Democrat for State Senate

Heavy hitters turn out for Sara

On September 3rd, Sara had a highly successful campaign fundraiser at the Wellesley College Club, headlined by Governor Deval Patrick and Congressman Barney Frank. Many other local leaders, past and present, were in attendance, joined by more than 112 people from across the district, for an event that felt more like a pep rally than a political fundraiser.

Governor Deval Patrick (above with Sara) and Congressman Barney Frank (below) get the crowd jazzed up about Sara's impressive candidacy!

Policy – In her own words

Endorsed by the Sierra Club, Orozco talks Cape Wind and “Green-Tech” leadership

I am eager to serve my district and the state as we strive for more renewable and sustainable energy sources to reduce oil dependence and dial back the climate crisis. Cape Wind is a symbol of the willingness of the people of Massachusetts to invest in a green future, and I support Cape Wind as it goes from a bright idea to reality.

According to the Minerals Management Service review, Cape Wind's projected output would be enough to meet the yearly demand from about 223,776 households. This output is equivalent to about 75 percent of the average electricity demand on the Cape and Islands. Electricity from Cape Wind will reduce the flow of electricity from other sources into the Cape and Islands grid.

Sara shares positions publicly on WBZ Voter Guide and her campaign website

WBZ-TV and WBZ 1030 have posted an online Voter Guide and Sara was among the first candidates to share her positions publicly. At this writing, her opponent had not submitted his answers to questions posed by WBZ. Please visit this link to see Sara's responses and to watch for what her opponent might say.

Attorney General
Martha Coakley to
headline Women's
Leadership Event for
Sara October 2nd
5:00 - 7:30 PM
Stay tuned!

Cape Wind, Green-Tech, cont.

Leading environmental organizations, including Greenpeace, the Natural Resources Defense Council, and the Sierra Club, want Cape Wind to be implemented.

The green-collar work of the future is here now - things like building parts for and assembling wind turbines, solar-panel construction and installation, retrofitting buildings that are leaking energy, wastewater reclamation, organic food, materials reuse and recycling - and that means the need to teach, train, and hire green-collar workers across the Commonwealth.

While it is critical that we transition our energy consumption patterns to become more environmentally friendly, it is also essential that we invest in green-collar industries as our state's next "industrial revolution". Massachusetts has a long tradition of serving as an international resource and incubator for industries such as high tech, biotech, academia, and health care. Just as those industries have improved our quality of life, they have also enriched our economy. Following on those successes, Massachusetts can and should become the Green-Tech capitol of the world.
